Submission Worksheet

Submission Data

Course: IT202-450-M2025
Assignment: Milestone 2 API Testing
Student: Wilfer G. (wg99)
Status: Submitted | **Worksheet Progress:** 100%
Potential Grade: 10.00/10.00 (100.00%)
Received Grade: 0.00/10.00 (0.00%)
Started: 7/14/2025 2:51:01 PM
Updated: 7/14/2025 4:29:47 PM

Instructions

- Overview Link: https://youtu.be/86v8Ak0E3XE

1. Ensure you read all instructions and objectives before starting.
2. Ensure you added your API choice to the Google doc shared on Canvas (selections must be unique, no two students can use the same exact API)
3. Create a new branch from `Milestone2` called `M7-Homework`
    1. `git checkout Milestone2` (ensure proper starting branch)
    2. If you don't have `Milestone2` yet, create it from `Milestone1`
    3. `git pull origin Milestone2` (ensure history is up to date)
    4. `git checkout -b M7-Homework` (create and switch to branch)
4. Follow the lesson from
    - Add `testApi.php` to your `project` folder
    - Immediately record to history
        - `git add public_html`
        - `git commit -m "adding M7 HW baseline files"`
        - `git push origin M7-Homework`
        - Create a Pull Request from `M7-Homework` to `Milestone2` and keep it open
5. Fill out the below worksheet
    - Ensure you add the UCID/Date and details comments as you work
    - Get the example working with your chosen API
6. Once finished, click "Submit and Export"
7. Locally add the generated PDF to a folder of your choosing inside your repository folder and move it to Github
    1. `git add .`
    2. `git commit -m "adding PDF"`
    3. `git push origin M7-Homework`
    4. On Github merge the pull request from `M7-Homework` to `Milestone2`
    5. On Github create and merge the pull request from `Milestone2` to `dev`
    6. On Github create a pull request from `dev` to `prod` and immediately merge. (This will trigger the `prod` deploy to make the Heroku prod links work)

8. Upload the same PDF to Canvas
9. Sync Local
    1. `git checkout dev`
    2. `git pull origin dev`
    3. `git checkout Milestone2`
    4. `git pull origin Milestone2`

Section #1: (2 pts.) Analyze Api Choice

Progress: 100%

Task #1 (0.40 pts.) - API Link

Progress: 100%

URL #1

https://rapidapi.com/mapsiter/api/countrywise/playground/apiendpoint_75098013-aea3-44ad-b056-42cdb14e471d

URL

https://rapidapi.com/mapsite

Saved: 7/14/2025 2:51:01 PM

Task #2 (0.80 pts.) - Quota and Limitations

Progress: 100%

Your Response:

The CountryWise API plan I am using allows up to 1000 requests per hour. This means I can make as many as 1000 API calls within any given hour, but if I exceed this limit, further requests will be blocked until the next hour begins.

Saved: 7/14/2025 3:18:48 PM

Task #3 (0.80 pts.) - Goal Data

Progress: 100%

Details:

- Clearly note what type of data you'll be using
- Clearly note the specific properties you intend to use (it's likely not all of them)

Your Response:

I will be using country data from the CountryWise API. The specific properties I intend to use are the country name, currency, languages, region, and ISO codes. These fields will allow me to display key information about each country without including unnecessary details from the full API response.

Saved: 7/14/2025 3:19:57 PM

Section #2: (6 pts.) Verify Api Choice

Progress: 100%

☰ Task #1 (6 pts.) - Edit the `testApi.php` file (and related `.env` content) to test your chosen API

Progress: 100%

Details:

- The code will need to be adjusted since your API differs from the one I chose
- You'll need to apply the API `.env` items to Heroku's config vars both `dev` and `prod`
- Be mindful of your API quota (may need to initially use a cached response until you get it working)

Part 1:

Progress: 100%

Details:
Two screenshots are expected

1. Snippet of relevant code showing solution (with ucid/date comment) 2. Don't show any private details like the API key
2. Full output of executing the `testApi.php` (visit the proper file on Heroku dev after a manual deploy)

Part 2:

Progress: 100%

Details:

- Direct link to the file in the homework related branch from Github (should end in `.php`)
- Direct link to the file on Heroku Prod (Just grab the base prod url and manually enter the path to the file)

Part 3:

Progress: 100%

Details:
Briefly explain what you needed to do in order to get this test working

Your Response:

To get this test working, I needed to set up my RapidAPI CountryWise API key as an environment variable and make sure it was loaded in my PHP code. I then built a form to let users enter a country name, constructed the API request using the submitted value, and set the required headers with the API key. Finally, I handled the API response and displayed the result on the page, making sure to show errors if the key was missing or the request failed.

Section #3: (2 pts.) Misc

Progress: 100%

Task #1 (0.67 pts.) - Github Details

Progress: 100%

Part 1:

Progress: 100%

Details:
From the Commits tab of the Pull Request screenshot the commit history Following minimum should be present

commit/pull history

Saved: 7/14/2025 4:25:35 PM

Part 2:

Progress: 100%

Details:
Include the link to the Pull Request (should end in `/pull/#`)

Task #2 (0.67 pts.) - WakaTime - Activity

Progress: 100%

Details:

- Visit the WakaTime.com Dashboard
- Click `Projects` and find your repository
- Capture the overall time at the top that includes the repository name
- Capture the individual time at the bottom that includes the file time
- Note: The duration isn't relevant for the grade and the visual graphs aren't necessary

Task #3 (0.67 pts.) - Reflection

Progress: 100%

Task #1 (0.33 pts.) - What did you learn?

Progress: 100%

Details:
Briefly answer the question (at least a few decent sentences)

Your Response:

I learned how to securely connect to an external API using environment variables for sensitive information like API keys. I also practiced building a simple PHP form to collect user input, send it to the API, and display the results on the page. Additionally, I gained experience handling API responses and errors.

Saved: 7/14/2025 4:27:41 PM

Task #2 (0.33 pts.) - What was the easiest part of the assignment?

Progress: 100%

Details:
Briefly answer the question (at least a few decent sentences)

Your Response:

The easiest part of the assignment was setting up the API request using cURL in PHP. Once I had the correct API endpoint and headers, it was pretty easy to send a request and handle the response. Displaying the results on the page was also simple, since I could just use json_encode to show the data in a readable format.

Saved: 7/14/2025 4:28:44 PM

Task #3 (0.33 pts.) - What was the hardest part of the assignment?

Progress: 100%

Details:
Briefly answer the question (at least a few decent sentences)

Your Response:

The hardest part of the assignment was making sure the API key was loaded correctly from the environment, especially since PHP does not automatically read files. I had to double-check that the key was set both locally and on Heroku, and troubleshoot why the API was returning an "Invalid API key" error. It also took

me some effort to understand the correct way to pass parameters to the API and handle different types of errors in the response.
